

Company Name

POSITIVE ONE CORPORATION

Headquarter

Shibuya Mark City West 22F, 1-12-1, Dougenzaka, Shibuya-ku, Tokyo 150043 JAPAN
TEL +81-3-3256-3933 FAX +813-4360-5301

Tama office

4-72, Sekido, Tama City, Tokyo, 2060011 JAPAN
TEL +8142-375-0785 FAX +81-42-375-0958

Founded

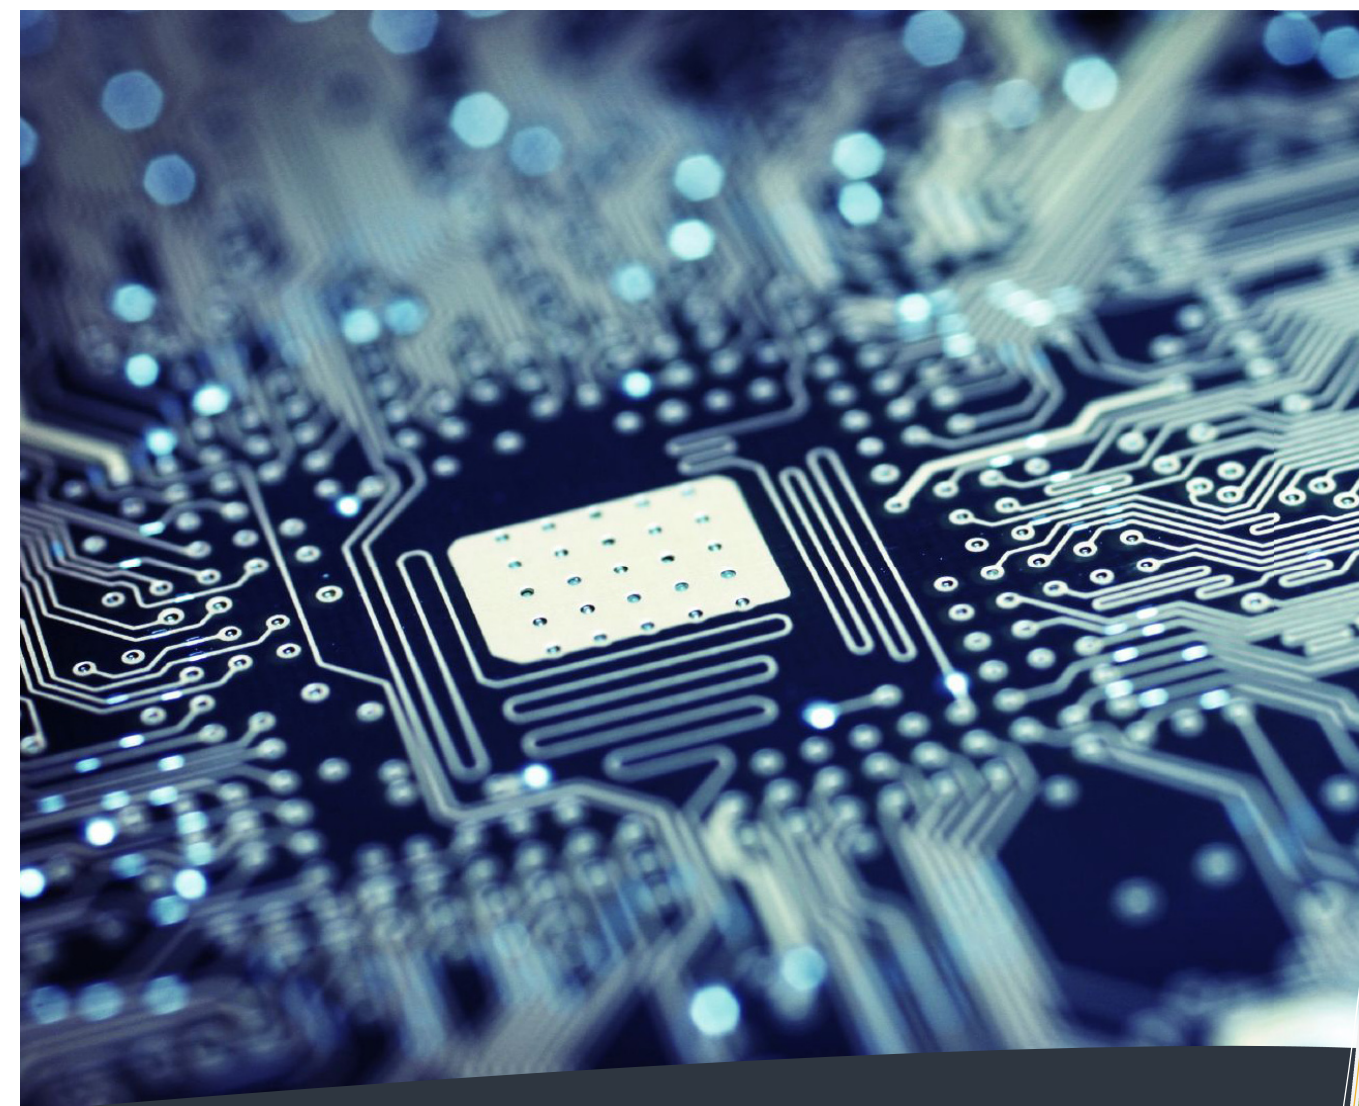

January 6th, 2004

Business items

- System Integration (Application, Firmware, Hardware)
- Import sales and supports of Industrial electronic equipment
- OEM/ODM
- Consulting and an authentication service of smart card (EMV, NFCFORUM, ISO etc)
- Management and consulting projects for product development

Group Company

Positive ONE Corporation

System Integration

AN OFFERING A ONE-STOP SOLUTION OF VARIOUS TECHNOLOGY

To plan and develop a new system, POSITIVEONE Company can procure electronic equipment and materials and take charge of your product innovation

Although a just one field of Information Technology, there are striking differences of technical development from each product. In addition to, we need to choose technology with suitable specs and control differences of those because we have to deal with various technical equipment and product development. That'll make many time-to-market product developments possible. In this cases, we could be helpful and become your partner perfectly.

We, Positive One, can manage widespread areas. For example, hardware, GUI, driver, a design for circuit and FPGA IP, porting Embedded OS, client-server system and so on.

We often receive some trust development to be related to a major manufacturer and circulation service. We are given it in trust and develop it after performing cutting it into pieces well, and having made each other's roles clear.

AN INDEPENDENT ADMINISTRATIVE AGENCY
THE SCIENCE OF DISASTER PREVENTION INSTITUTE
HYOGO EARTHQUAKE TECHNOLOGY RESEARCH CENTER
独立行政法人防災科学技術研究所兵庫耐震工学研究センター

In the large-sized base-isolating device system which tests by carrying a real building on a board and producing an earthquake, we were asked for construction a transmitted dispersion system that it supported a multi-CPU, and developed RTOS and the transmitted dispersion system.

The Best of Solution

A next-generation semiconductor and ISO-certified

We can propose solution of board computer which gets a sense of semiconductor maker

Positive One aim at OEM/ODM business. For new product development, I suggest OEM/ODM and the board computer when you examine an introduction of the latest semiconductor which has suitable specifications.

The board computer attracts attention in developing products because we can immediately start to evaluate a software and embed various limited production as a characteristic of the board computer.

In addition, needs is always high because we can link a market of semiconductor maker, and the semiconductor solution suitable for it.

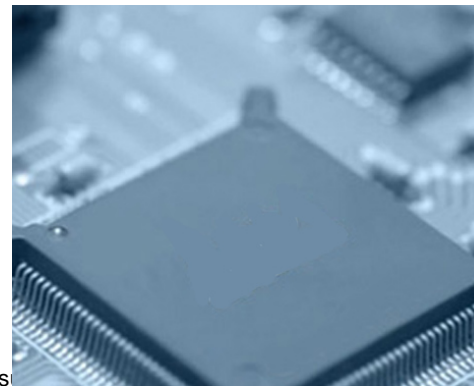

We propose the board computer suitable for specifications, software and design for compatible hardware and driver.

Global Network

A content that we can suggest becomes restricted when we suggest the latest board computer. Therefore we can provide much solution by a tie-up with a global board computer with abundant experience and results.

Alliance with Semiconductor Manufacturer

To provide the leading-edge semiconductor technology in accord with market, an alliance of semiconductor manufacturers (e.g. Freescale, Renesas, Marvell, NVIDIA, TI) becomes essential. We make a contract with them because we get the latest trend and information about semiconductor.

ISO-certified

In the field of manufacturer, their globalization advances. Development products based on the global certification is demanded. Therefore service for the certification of the product which we developed and inspecting tools are necessary.

Safety Critical

We propose an inspecting tools and software which could be confirmed as IEC61508, EN50128 and ISO26262 and used by an aerospace, railway, medical equipment and plant system.

Smart Card

For Smart Card technology used by personal information and a payment system, an authorizing examination which based on private specifications such as EMV and NFCFORUM, or public specifications of ISO is necessary.

System integration

Even if you lump IT together, Application, firmware, hardware...

A way of thinking and a development process in application, firmware, hardware..., the development art are different.

We can work one stop to develop.

Or, when you want to entrust to develop part. We can work that.

Please contact us.

Embedded related Products

Positive ONE suggests board computer. Development tools, validation tools etc...

If you look for something, please contact us.
